

bewi dog® puppy milk gives them a perfect start in life.

The first few days of life are important for the healthy development of your puppy.

benefits:

- Rich in minerals
- Adapted to the natural composition of dog milk
- Targets the compensation of any deficits of the whelps (vitamins, minerals)

composition:

Milk and dairy products; Oils and fats; Derivatives of vegetable origin; Minerals

feeding recommendation:

Recommended quantity of food per animal in g/day

Whelps require approximately 15 g of **BEWI DOG®** puppy milk drink per 100g of body weight (= for 1 kg of body weight, feed 150 g of the drink). **BEWI DOG®** puppy milk is mixed with warm (60° C) water in a ration of 2:1 (e.g. 50 g **BEWI DOG®** puppy milk plus 100 g water = 150 g of the drink). Add the powder to the water (not vice versa). Feed 5-6 times daily at the beginning, later 3 times daily.

puppy milk

For hand-raising puppies and as a supplement when the mother does not have enough milk
